SUBJECT INDEX

Amine catalysts, p. 60
Appliances, pp. 291, 302
Blowing agents, pp. 11, 84, 164, 175, 539, 554
  alternatives, pp. 126, 554
  auxiliary, p. 175
  azodicarbonamide, p. 175
  chemical, p. 175
  decomposition behavior, p. 175
  low boiling, p. 291
  miscibility, p. 11
  mixed, p. 175
  OBSH, p. 175
  pentane, p. 509
  permeation, p. 126
  selection criteria, p. 11
  solubility, p. 11
  1,1,1,2-tetrafluoroethane, p. 164
  thermal conductivity, pp. 11, 84
Car seats, p. 361
Carbodiimide, p. 470
Cell size reduction, p. 302
CFC alternatives, pp. 126, 164, 554
Compression molding, p. 175
Emulsion technology, p. 302
Foam
  aging, p. 106
  automotive, p. 361
  cell gas, p. 126
  cross-linked, p. 175
  dielectric analysis, p. 273
  EVA, p. 175
  flexible, pp. 144, 361
  hardness, p. 361
  high resiliency, p. 144
  insulation, pp. 126, 164, 291
  isocyanurate, p. 84
  molded, p. 144
  polystyrene bead, p. 196
  polyurethane, pp. 11, 34, 60, 291
  refrigerator insulating, p. 291
  rigid, p. 106
  thermal insulating, p. 106
  urethane, pp. 44, 273
  zero ODP, p. 164
FTIR, pp. 224, 316, 338
Gas diffusion, p. 126
Global warming, p. 84
HCFC 142b/HCFC 22, pp. 291, 302
Hydrofluorocarbon ether, p. 84
Hydrofluorocarbons, p. 84
Insulation, pp. 11, 84, 126, 164
  rigid, p. 302
  thermal, p. 316
  value drift, p. 126
Isocyanurate foam, pp. 84, 470
k-factor, pp. 106, 126
Permeation studies, p. 126
Polycarbodiimide, p. 470
Polyethylene, p. 444
Polyisocyanurate foam, pp. 316, 470
  aging, p. 316
  carbodiimide-modified, p. 470
  combustibility, p. 470
  density, p. 316
  flame resistance, p. 470
  flame retardance, p. 470
  heat transfer, p. 316
  humidity effects, p. 316
  polycarbodiimide, p. 470
  smoke suppression, p. 470
  thermal insulation, p. 316
Polyols, p. 44
  amine terminated, p. 144
  polyester, p. 60
  smooth rise profile, p. 60
Polystyrene bead foam, p. 196
  cycle helmets, p. 196
  fracture, p. 196
  properties, p. 196
  water immersion effect, p. 196
Polyurea, p. 144

SUBJECT INDEX

Amine catalysts, p. 60
Appliances, pp. 291, 302
Blowing agents, pp. 11, 84, 164, 175, 539, 554
  alternatives, pp. 126, 554
  auxiliary, p. 175
  azodicarbonamide, p. 175
  chemical, p. 175
  decomposition behavior, p. 175
  low boiling, p. 291
  miscibility, p. 11
  mixed, p. 175
  OBSH, p. 175
  pentane, p. 509
  permeation, p. 126
  selection criteria, p. 11
  solubility, p. 11
  1,1,1,2-tetrafluoroethane, p. 164
  thermal conductivity, pp. 11, 84
Car seats, p. 361
Carbodiimide, p. 470
Cell size reduction, p. 302
CFC alternatives, pp. 126, 164, 554
Compression molding, p. 175
Emulsion technology, p. 302
Foam
  aging, p. 106
  automotive, p. 361
  cell gas, p. 126
  cross-linked, p. 175
  dielectric analysis, p. 273
  EVA, p. 175
  flexible, pp. 144, 361
  hardness, p. 361
  high resiliency, p. 144
  insulation, pp. 126, 164, 291
  isocyanurate, p. 84
  molded, p. 144
  polystyrene bead, p. 196
  polyurethane, pp. 11, 34, 60, 291
  refrigerator insulating, p. 291
  rigid, p. 106
  thermal insulating, p. 106
  urethane, pp. 44, 273
  zero ODP, p. 164
FTIR, pp. 224, 316, 338
Gas diffusion, p. 126
Global warming, p. 84
HCFC 142b/HCFC 22, pp. 291, 302
Hydrofluorocarbon ether, p. 84
Hydrofluorocarbons, p. 84
Insulation, pp. 11, 84, 126, 164
  rigid, p. 302
  thermal, p. 316
  value drift, p. 126
Isocyanurate foam, pp. 84, 470
k-factor, pp. 106, 126
Permeation studies, p. 126
Polycarbodiimide, p. 470
Polyethylene, p. 444
Polyisocyanurate foam, pp. 316, 470
  aging, p. 316
  carbodiimide-modified, p. 470
  combustibility, p. 470
  density, p. 316
  flame resistance, p. 470
  flame retardance, p. 470
  heat transfer, p. 316
  humidity effects, p. 316
  polycarbodiimide, p. 470
  smoke suppression, p. 470
  thermal insulation, p. 316
Polyols, p. 44
  amine terminated, p. 144
  polyester, p. 60
  smooth rise profile, p. 60
Polystyrene bead foam, p. 196
  cycle helmets, p. 196
  fracture, p. 196
  properties, p. 196
  water immersion effect, p. 196
Polyurea, p. 144

Polyurethane foam, pp. 11, 34, 60, 224, 291, 302, 316, 338, 454, 494, 509, 522, 539
aging, p. 539
appliances, pp. 291, 554
barrier property improvements, p. 242
behavior under impact, p. 34
carbon dioxide blown, p. 494
cell structure, p. 224
dynamic tests of, p. 34
fatigue, p. 454
fire performance, p. 509
flexible slabstock, pp. 60, 224, 338, 454, 522
gas diffusion, p. 539
gas permeability of, p. 242
hard domain formation, pp. 224, 338
heat transfer, p. 539
insulation properties, pp. 509, 554
molded, pp. 224, 338
phase separation, pp. 224, 338
polymer structure, pp. 242, 454
polyols, p. 454
processing, p. 454
rigid, pp. 164, 242, 302, 494, 509
strain rate, p. 34
temperature profile, p. 224
thermal performance, p. 539
viscosity, p. 338
R-value, p. 106
SAXS, pp. 224, 338
Silicone surfactants, p. 60
TDI, p. 44
Thermal conductivity aging, pp. 291, 316
Thermoplastic foam nucleation, p. 444
foam extrusion, p. 444
nucleation cavity, p. 444
physical blowing agent, p. 444
shear force, p. 444
shear rate, p. 444
Urethane foam, pp. 44, 84
chemicals, p. 44
interfacial mixing, p. 44
rigid, p. 84
Vibrating rod viscometer, p. 224
